

# AIM SERIES 2

Bold Performance.

**SpeakerCraft®**

Fully Pivoting, High Fidelity  
In-Ceiling Loudspeakers.

# The Legend Lives On.

For nearly four decades, SpeakerCraft has been turning houses into homes with audio breakthroughs that make every moment more meaningful.

The latest breakthrough is the AIM Series 2 line of in-ceiling speakers. AIM Series 2 takes the legendary AIM performance and totally ReCrafts it to deliver a new performance standard.

# Get Greater Performance From Your Sound System.

More revolutionary than evolutionary, SpeakerCraft AIM Series 2 has been 100% ReCrafted to support sophisticated installations, demanding sonic performance, and advanced object-based surround audio platforms.

It starts with the ARC Tweeter Array™ – multiple tweeters in a line array – delivering focused high frequencies farther into the listening area than standard tweeter configurations. It also enables a lower crossover point to increase sound pressure at the critical midrange frequencies. Acoustically, you enjoy a much larger sweet spot.

The new high  
performance standard.

# A Bolder, Richer Sound.

Ordinary speakers only sound their best when you are directly underneath them, but the AIM Series 2 delivers optimal high frequency dispersion throughout your listening area. Leveraging a technology akin to an acoustic lens, the AIM Series 2 focuses high frequency audio energy into the listening environment for a cleaner, wider, and richer sound.

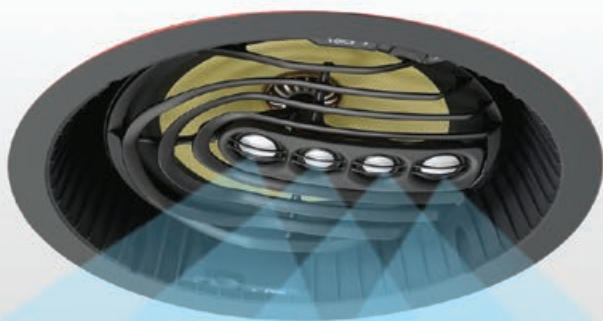

# Taking Audio To New Heights.

The enhanced aim-ability of the AIM Series 2 presents new options for sound design—from home theater to whole home audio. More than ever, sound can be directed to a specific section of a room, angled toward a seating area or wherever you are looking to make an audio impact, and is the perfect solution for all object based surround systems (Dolby Atmos, DTS-X, Auro-3D).

AIM Series 2 also introduces Acoustic Isolation Technology™ with co-molded materials that decouple the speaker housing from the surrounding materials, significantly reducing structural resonance created by the surrounding ceiling. The AIM Series 2 ReCrafting addresses every aspect of the speaker, from front to back, resulting in a sound solution you'll have to hear to believe.

The ARC Tweeter Array™ in the new AIM Series 2 delivers improved control of the high frequency dispersion and enhanced speech intelligibly via advanced beam steering.

Radiates sound with  
precision dispersion.

# AIM Series 2. A Speaker for Every Need.

AIM Series 2 Speakers come in three sizes, each with three different material configurations. Plus, the line includes three dual and selectable tweeter models. All speakers are 8 Ohm nominal impedance and feature pivoting woofers and tweeters with 360° rotational adjustability.

Three sizes, each with multiple materials and settings.

# 100% ReCrafted.

Simply put, every element of the AIM Series 2 has been ReCrafted for heightened sound performance and aesthetics, creating the speakers against which all others will be judged.

## NOTABLY, THE AIM SERIES 2 INTRODUCES:

- Patented adjustable and pivoting ARC Tweeter Array™ for the most accurate sound placement of any architectural speaker, with exceptional sound quality in the critical mid-range frequencies.
- Updated WavePlane™ Technology for better sound dispersion.
- Patent-pending Acoustic Isolation Technology™ for reduced structural resonance.
