

EZ-SnapJack

New & Improved Design: the EZ-SnapJack design has been upgraded to incorporate an internal contacts/PC board as used in virtually all industry standard punch down type jacks. This change provides for a better and more consistent connectivity with the internal port contacts.

NOTE: the color order of the wire guide bar has changed. Follow it! The end result at the front end (the port) will be your chosen T568 A or B.

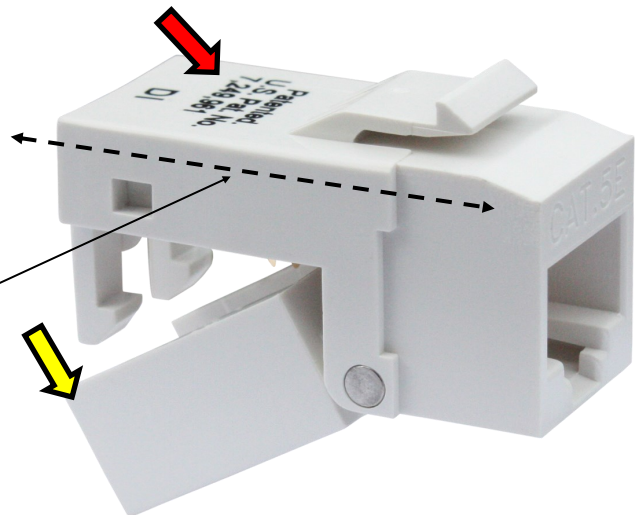

The wire guide bar pairing in the new designed EZ-SnapJack is:

2—1 / 3—6 / 4—5 / 8—7

NOTE: quick visuals to know if you have the new design:

- Patent info printed topside (Red arrow)
- Body is one piece construction (not split)
- Wire guide bar door opens downward (yellow arrow)

The wire guide bar pairing in the original EZ-SnapJack is:

1—2 / 3—6 / 5—4 / 7—8
