

R8300 SERIES

SLIM OPEN TOWER RACK

The R8300 Open Tower series is designed to provide a sturdy open frame without side, front or back panels so that accessibility and ventilation is as high as possible.

Our R8300 Open Tower rack is a high-quality steel product offering a unique option for those needing an enclosure without panels, providing installers with maximum ventilation and accessibility.

Our model is not only affordably-priced, manufactured using our trademark high quality steel and construction but also offers cable management rails, support cross braces and W0950 dual castor/foot arrays as standard - features not available elsewhere.

It comes with 10/32 threaded rack rails which are mounted externally on the sides of the top and base using low profile machine screws. This has allowed us to offer a model that retains a very narrow width at just 19.21".

Exceptional cable management is provided with cable tie cutouts in the top and base as well as in the dedicated cross brace rails at the sides. Highly dynamic mobility and securement comes thanks to the inclusion of our W0950 dual option castor / foot arrays which can also be swapped out for alternative castors.

PRODUCT FEATURES

- 4 x 10/32 threaded rack rails
- Cable management at top, base and sides
- Additional support cross braces
- Top unit offers rack space for cooling units or cable management
- 4 x W0950 dual castor / feet
- Available in 3 depths: 16", 20" and 26"
- Multiple U sizes
