SUSPENSION

Si Trapeze AS-3

The trapeze Si suspension system allows for overhead sound from high ceilings and meets the needs of distributed or localized public address systems by freeing themselves from walls or supporting surfaces. By using isolated suspension cables, the signal transmission is integrated within the mechanical functionalities of the system. The included collar nut and the Trapeze tube make the orientation of the loudspeaker both accurate, elegant and easy.

Application Overhead

Orientation 2 axis 360°

Code produit FF/AS3TSi

Name Si Trapeze kit

Details

- 1x Ceiling disc
- 1x Ceiling fixing bracket
- 2x M6x30 bolt
- 1x M8x20 bolt
